

Suspicious Face Recognition

in computer-based academic lab monitoring

Ahmed M.H.A
190028C

The Problem

- Majority of computer-based labs
- Compact Seating arrangements
- Higher manpower for monitoring
- Real-Time Detection
- Immediate Action

Sub Problems to be solved

01

Good quality video capturing

02

Accuracy of the Detection systems

- Lighting
- Pose

03

Real-time and push notifications

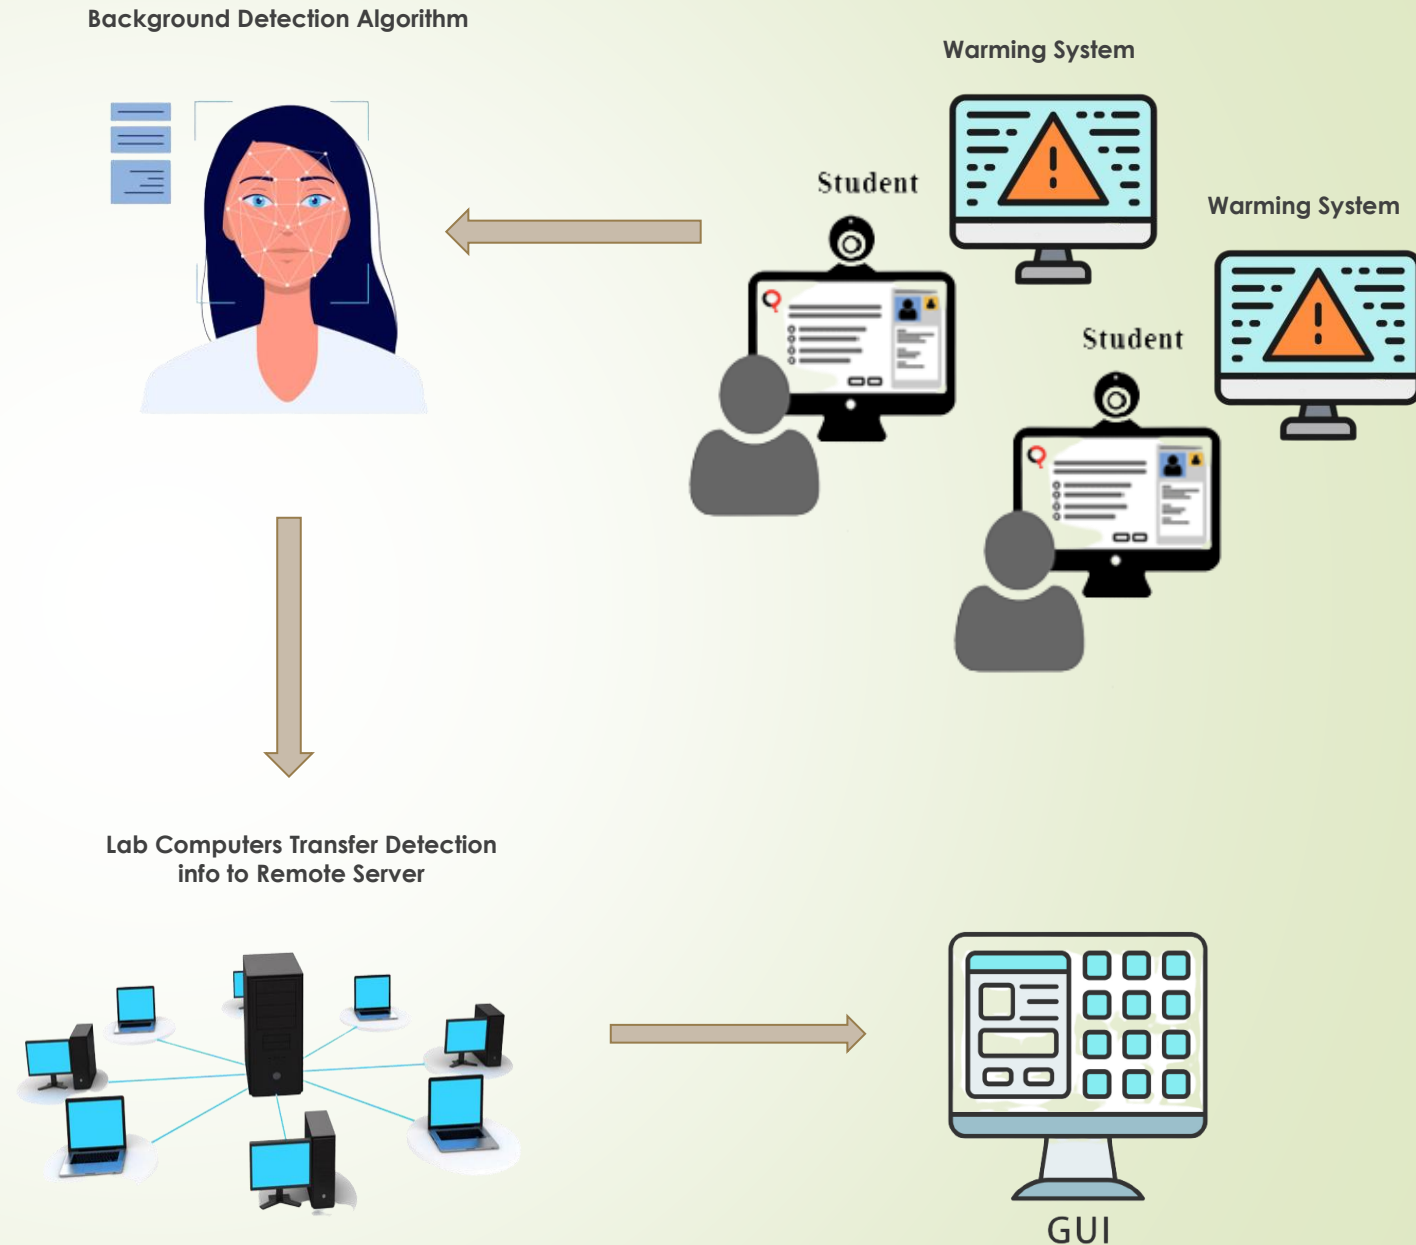

04

Multiple detections notified

The Proposed System

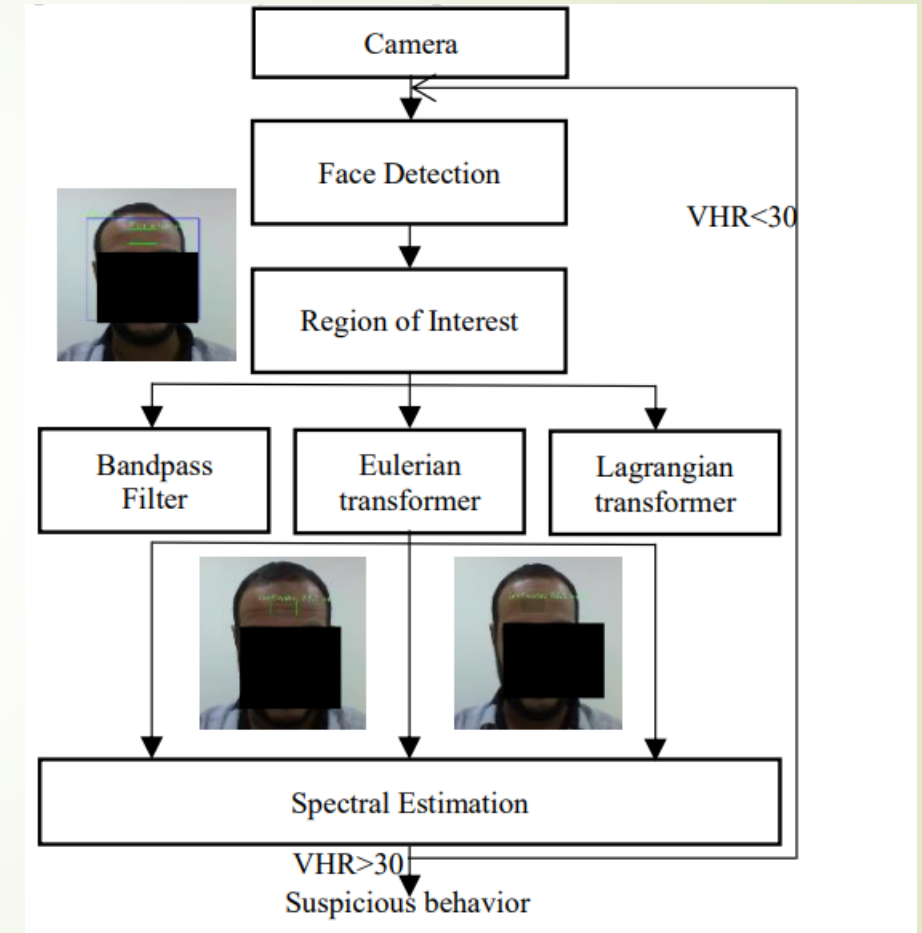

- ❑ Student Monitoring
- ❑ Warning System
- ❑ Suspicious Activity Detection Algorithm
 - Multiple Face Detection
 - Face Orientation Detection
 - No Face Detected
- ❑ Remote Server
- ❑ Graphical User Interface

Research on

Suspicious Behavior Recognition Based on Facial Features ¹

- Fear - a suspect behavior
- Heart rate estimation system
 - Bandpass Filter
 - Eulerian Transformer
 - Lagrangian Transformer
- CK+ Dataset

Research on

Suspicious Human Activity Detection in Classroom Examination ²

➤ Head Orientation Detection

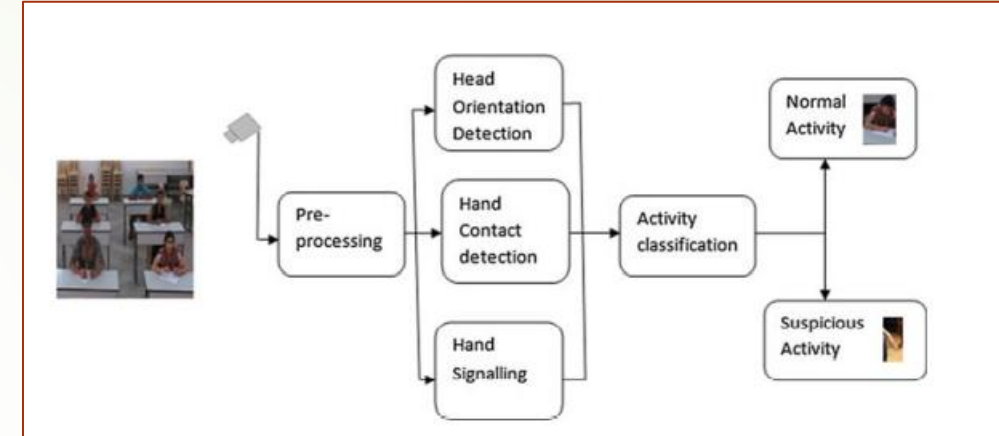

- Using **HAAR** features
- Using **AdaBoost** classifier
- Head pose variation beyond the **threshold value**

➤ Hand Signaling Detection

- Using **Convex Hull of Hand Contour**

➤ Hand Movement Detection

- **Dilation** and **Erosion**

(eds) Computational Intelligence, Cyber Security and Computational Models. Advances in Intelligent Systems and Computing, vol 412. Springer, Singapore. https://doi.org/10.1007/978-981-10-0251-9_11

Research on

Automated Invigilation System for Detection of Suspicious Activities during Examinations ³

- Histogram of Oriented Gradients (**HOG**) *Detection algorithm*
- **Haar** Feature Classifier
 - A part of **Viola Jones algorithm**
 - Fast in locating the mouth regions and face
 - **Open Mouth Detection** – With **threshold limit**
- **AdaBoost**
 - Performance boosting algorithm
 - Sensitive to noise and outliers

³ M. Adil, R. Simon and S. K. Khatri, "Automated Invigilation System for Detection of Suspicious Activities during Examination," 2019 Amity International Conference on Artificial Intelligence (AICAI), 2019, pp. 361-366, doi: 10.1109/AICAI.2019.8701263.

Research continued

Automated Invigilation System for Detection of Suspicious Activities during Examinations ³

➤ Principal Component Analysis (PCA)

- **Eigen Face** approach – simple & robust

➤ Hand Contact Detection

- Overlapping grid is detected outside own body grid

➤ Head Orientation Detection

- Using the Principal Component Analysis along with the Viola Jones algorithm
- Based on the threshold

Research on

Inference-Based Statistical Analysis for Suspicious Activity Detection Using Facial Analysis ⁴

➤ Face Detection

- **Local Binary Pattern (LBP) Operator**
 - Overcomes problems in PCA
- **Haar** cascade algorithms
 - To prevent false results
- **Dlib**
 - A **face landmark detector** with pre-trained models

Research continued ...

Inference-Based Statistical Analysis for Suspicious Activity Detection Using Facial Analysis ⁴

➤ Face Expression classification

- Linear support vector machine **SVM model**
- **CK+** dataset

➤ Face Alignment

- **SIFTROI** - a preprocessing method

➤ Face feature extraction

- LBP, Supervised descent technique, WLD, WPLBP, HOG, ICA, PCA

Demonstration of this project...

Suspicious Activity Detection Algorithm as a background application.

The **Remote Server** to which the information (time, pc info) related to the detected Suspicious Activity is sent in real-time.
